

Rosemount™ 0085 Pipe Clamp Sensor

- Direct mount assembly with Rosemount 3144P Temperature Transmitter or Rosemount 648 Wireless Temperature Transmitter with Rosemount X-well™ Technology provides accurate process temperature without the requirement of a thermowell or process penetration
- Non-intrusive design for fast and easy temperature measurement in piping applications
- Platinum RTD temperature sensors with silver tip
- Integrated temperature assemblies provide time and cost savings

Features and benefits

Rosemount X-well Technology provides a Complete Point Solution™ for accurately measuring process temperature without the requirement of a thermowell or process penetration.

- Simplify temperature measurement point specification, installation and maintenance, and eliminate possible leak points
- Calculates a repeatable and accurate process temperature measurement via an in-transmitter thermal conductivity algorithm
- Measures pipe surface and ambient temperature, and utilizes the thermal conductivity properties of the installation and process piping in order to provide an accurate process measurement

Proven pipe clamp sensors deliver excellent performance and reliability

- Superior accuracy and stability
- Improved response time with silver tip

Easy implementation and installation in existing application

- Available in a wide variety of pipe sizes and materials
- Installation requires no welding
- Optimized surface contact by spring loaded sensor design

Minimized risk of sensor failure and unplanned shutdowns

- Avoids stresses related to flow, pressure, chemical contact, abrasion, vibration, and bending
- Maintenance of sensor without shutdown of process

Achieve optimal efficiency with Rosemount wireless transmitter offering

Measure your temperature anywhere

Explore the benefits of Complete Point Solutions from Rosemount Temperature Measurement

- An “Assemble to Transmitter” option enables Emerson to provide a complete point temperature solution. This delivers an installation-ready transmitter and sensor assembly.
- Emerson has a complete portfolio of single point, high density, and wireless temperature measurement solutions. This allows you to effectively measure and control your processes with the reliability you trust from Rosemount products.

Experience global consistency and local support from numerous worldwide Rosemount Temperature sites

- Experienced Instrumentation Consultants help select the right product for any temperature application and advise on best installation practices
- An extensive global network of Emerson service and support personnel can be on-site when and where they are needed

Ordering information

Universal Pipe Mount

Pipe Clamp

The Rosemount 0085 Pipe Clamp Sensor is designed for fast and easy non-intrusive surface temperature measurements in piping applications.

Features include:

- Temperature range of -58 to 572 °F (-50 to 300 °C)
- Suitable for pipe sizes ½ to 60 in. (22 to 1,524 mm)
- Single or Dual Element Class A Sensor
- Assemble-to-transmitter option

How to order Rosemount X-well Technology

Rosemount X-well Technology is for temperature monitoring applications. It is not intended for control or safety applications. It is available in the Rosemount 3144P Transmitter and 648 Wireless Transmitter in a factory assembled direct mount configuration with a Rosemount 0085 Pipe Clamp Sensor. It cannot be used in a remote mount configuration. Rosemount X-well Technology will only work as specified with factory supplied and assembled Rosemount 0085 Sensor silver-tipped single element sensor with a 3.1 in. (80 mm) extension length. If it is used with other sensors, then it will not work as specified.

Transmitter

The Rosemount 3144P option code requirements are:

Code	Description
D1-D4	Aluminum field mount housing
PT	Temperature measurement assembled with Rosemount X-well Technology
A	4–20 mA with digital signal based on HART® protocol
XA	Sensor specified separately and assembled to transmitter
C1	Custom configuration of date, descriptor, message, and wireless parameters ⁽¹⁾
HR7	Configured for HART Revision 7

(1) Requires CDS with order.

The Rosemount 648 Wireless option code requirements are:

Code	Description
PT	Temperature measurement assembled with Rosemount X-well Technology
XA	Sensor specified separately and assembled to transmitter
C1	Custom configuration of date, descriptor, message, and wireless parameters ⁽¹⁾

(1) Requires CDS with order.

Pipe Clamp Sensor

The Rosemount 0085 Pipe Clamp Sensor option code requirements are:

Code	Description
N	No connection head
3	Sensor connection
P1	Sensor type
J	Extension type
0080	Extension length
XA	Assemble sensor to specific temperature transmitter

Note

Rosemount X-well assemblies are available in most Rosemount 0085 Pipe Clamp sensor diameter sizes.

Typical model number of the assembly:	Rosemount 3144P and 0085 3144P D 1A 1 NA M5 PT C1 HR7 XA 0085 N 3 P1 J 0080 U 0169 N XA
	Rosemount 648 Wireless and 0085 648 D X 1 D NA WA3 WK1 M5 PT C1 XA 0085 N 3 P1 J 0080 U 0169 N XA

Overview

Rosemount pipe clamp overview

Emerson offers a range of RTDs alone, or as integrated temperature assemblies including Rosemount Temperature Transmitters and connection heads.

Rosemount Pipe Clamp Platinum RTD Sensors are highly linear and have a stable resistance versus temperature relationship. They are used primarily in industrial environments where high accuracy, durability, and long-term stability are required. They are designed to meet the most critical parameters of international standards: DIN EN 60751/IEC 751:1983 incorporating Amendments 1 and 2⁽³⁾.

Note

Rosemount Pipe Clamp Sensors are available in single and dual element types.

Selecting the extension length for a pipe clamp sensor

A direct mounting configuration allows heat from the process, aside from ambient temperature variations, to transfer from the pipe clamp to the transmitter housing. If the expected pipe surface temperature is near or above the transmitter specification limits, consider using additional extension length or a remote mounting configuration to isolate the transmitter. Figure 2 provides an example of the relationship between transmitter housing temperature rise and distance from the process.

Figure 2: Transmitter Housing Temperature Rise vs. Uninsulated Distance from the Process

(3) 100 Ω at 32 °F (0 °C), α = 0.00385 Ω x °C/Ω.

Example

The rated ambient temperature specification for the transmitter is 185 °F (85 °C). If the maximum ambient temperature is 104 °F (40 °C) and the temperature to be measured is 1,004 °F (540 °C), the maximum allowable housing temperature rise is the rated temperature specification limit minus the existing ambient temperature (85 – 40), or 113 °F (45 °C).

As shown in [Figure 2](#), an uninsulated distance from the process of 3.5 in. (90 mm) will result in a housing temperature rise of 71 °F (22 °C). Therefore, 3.9 in. (100 mm) would be the minimum recommended distance from the process providing a safety factor of about 77 °F (25 °C). A longer length, such as 5.9 in. (150 mm), is desired to reduce errors caused by transmitter temperature effect, although in that case the transmitter may require extra support.

Specifications

Material selection

Emerson provides a variety of Rosemount product with various product options and configurations. This includes Materials of Construction that can be expected to perform well in a wide range of applications.

The Rosemount product information presented is intended as a guide for the purchaser to make an appropriate selection for the application. It is the purchaser's sole responsibility to make a careful analysis of all process parameters when specifying product, materials, options and components for the particular application.

Examples of process parameters include:

- All chemical components
- Temperature
- Pressure
- Flow rate
- Abrasives
- Contaminants

Emerson is not in a position to evaluate or guarantee the compatibility of the process fluid or other process parameters with the product, options, configuration or materials of construction selected.

Rosemount pipe clamp platinum RTD

Nominal resistance

In accordance with IEC 60751, the nominal resistance is defined:

100 Ω RTD at 32 °F (0 °C)

$\alpha = 0.00385 \text{ } \Omega \times \text{ } ^\circ\text{C}/\Omega$, averaged between 32 to 212 °F (0 to 100 °C)

Limit deviations

Tolerance Class B, as standard $t = \pm(0.3 + 0.005 \times [t])$; temperature range -328 - 572 °F (-200 to 300 °C)

Tolerance Class A, as option $t = \pm(0.15 + 0.002 \times [t])$; temperature range -58 - 572 °F (-50 to 300 °C)

Process temperature range

-58 to 572 °F (-50 to 300 °C)

Ambient temperature range

-40 - 185 °F (-40 to 85 °C)

Self-heating

0.15 K/mW when measured as defined in IEC 60751

Insulation resistance

1,000 MΩ minimum insulation resistance when measured at 500 Vdc at room temperature

Sheath material

321 SST with mineral insulated cable construction and silver tip

Lead wires

PTFE insulated, silver-coated copper wire (See [Figure 3.](#))

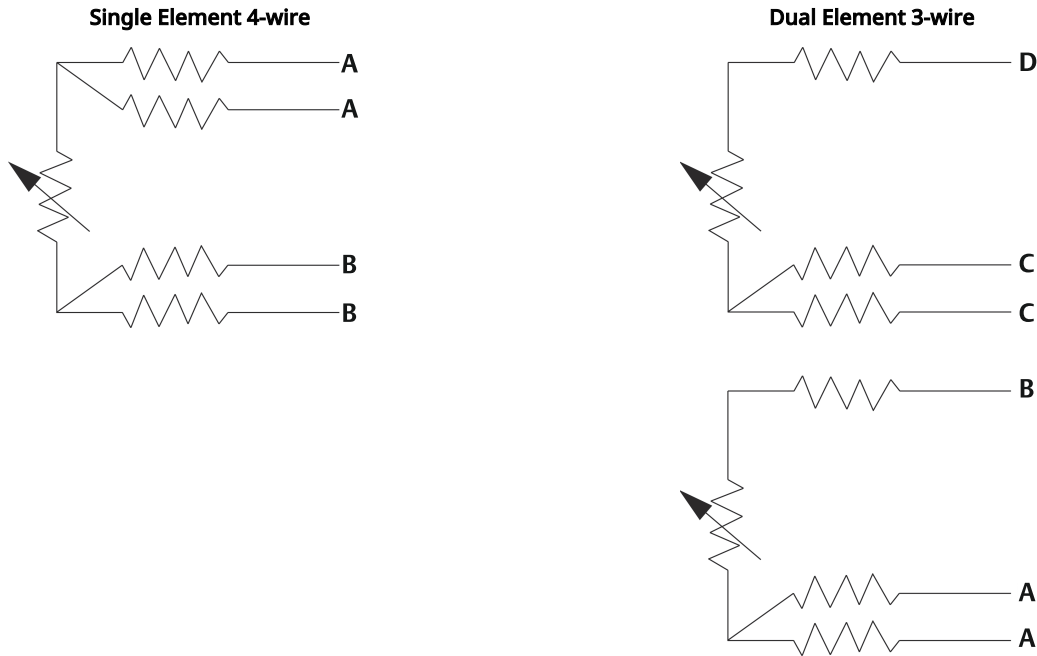

Identification data

The model and serial numbers are engraved directly on the spring-loaded adapter.

Ingress Protection (IP) rating for connection head

IP68 and NEMA® 4X

Figure 3: Sensor Lead Wire Termination - Pipe Clamp RTD Spring Loaded
